

For Immediate Release

Lowry Computer Products and GlobeRanger Partner on Comprehensive RFID Solution

San Bernardino County Dept. of Human Services to deploy Digital RFID Asset File Tracking solution that will enable asset labeling, identification, organization and tracking of case files in real-time

Brighton, MI and Richardson, TX – August 20, 2007 – Lowry Computer Products, a leading manufacturer and single-source integrator of radio frequency identification (RFID), wireless, bar code, and data collection solutions, today announced that it has partnered with GlobeRanger, the leading provider of RFID Edge software, mobility, and sensor-based applications for both enterprise and government customers, to create a comprehensive, RFID-based asset tracking and management solution for the San Bernardino County Department of Human Services. Lowry will integrate GlobeRanger's iMotion Edgeware Platform into its Digital RFID Asset File Tracking (DRAFT) application.

The San Bernardino County Department of Human Services will become the first organization to deploy DRAFT. Using DRAFT, the department will be able to label its entire library of case files and track the location of each file. San Bernardino County selected DRAFT to help streamline the on-boarding and off-boarding of case files and assist the Department of Human Services with HIPAA compliance.

"Organizations require a comprehensive asset management solution to maximize operational and cost efficiencies," said Michael Lowry, President of Lowry Computer Products. "Our partnership with GlobeRanger makes that possible. iMotion is flexible, reliable and scalable, and integrated with DRAFT, our solution gives organizations total control over their assets and empowers them with real-time information."

DRAFT, which includes RFID tag labeling and reading technologies, is complemented by GlobeRanger's iMotion Edgeware information collection, analysis and presentation capabilities. The iMotion platform provides the critical software infrastructure for automation at the edge. Comprehensive and enterprise-grade, iMotion enables quick, flexible implementation and effective operation of edge solutions.

"We're thrilled with our new relationship with Lowry," said Len Chermack, President and CEO of GlobeRanger. "DRAFT – which is easily deployable, cost-effective and comprehensive – will result in a near immediate return on investment for customers. Additionally, Lowry, with its 30-year history in AIDC, national presence and 24/7 nationwide service and support, as well as its established GSA contractor status, provides us with a much broader customer base to take advantage of the solution. We're excited about our collaboration with Lowry and look forward to our continued relationship."

Using a combination of bar code and RFID technology, Lowry's Digital RFID Asset & File Tracking (DRAFT) Management System provides the ability to configure and track an unlimited

hierarchy of file boxes, files, subfolders within files, and individual documents within folders, as well as providing the ability to define and track exhibits, assets, and evidence. The system streamlines movements such as check-in, check-out, transfer, boxing, file requests, and archiving. It will identify current locations of files and other assets, generate email notifications to current holders, and show the locations of assets on a floor plan. Each asset's movement will be stored in a location history, thereby providing chain-of-custody documentation. A web-based dashboard displays critical action items such as work to do, overdue items, items to re-file, pending requests, and pending archive orders. Multi-level security, comprehensive search functions, flexible user-defined label printing, electronic imaging, and automated file retention protocols are all integrated into the DRAFT Management System.

About Lowry Computer Products

Lowry Computer Products is a synergistic organization and single-source provider of leading edge technology, RFID Edge and Middleware software, expert professional services, and innovative RFID, wireless, bar code, and data collection solutions. Lowry's end-to-end solutions for asset management, supply chain visibility, work-in-progress, mandate compliance, and fresh harvest traceability deliver real ROI for its customers. Lowry also manufactures fully converted, tested, and ready-to-use Smart Trac™ labels with Gen 2 inlays as well as automated labeling systems for supply chain, packaging, and RFID applications. Through its 15 U.S. sales offices, 25 service centers, and a nationwide network of over 200 service partners, Lowry provides certified technical support and trusted customer service throughout North America.
